Why This Certification, Why Now

AI is moving from pilots into production across every function — and regulators, boards, auditors, and customers are all asking the same question: who governs it? This is the skillset that answers it.

Regulation has arrived

The EU AI Act, sector rules, and global frameworks now impose classification, documentation, and oversight duties with real penalties.

Standards are now the benchmark

ISO/IEC 42001 and the NIST AI RMF have become the reference points enterprises are assessed and audited against.

Generative AI outpaced controls

Shadow AI, prompt injection, data leakage, and hallucinated outputs need governance that traditional GRC never covered.

Accountability sits with people, not models

Committees, RACI, three lines of defense, and human oversight decide whether AI risk is actually owned.

FROM THEORY TO PRACTICE

What You'll Be Able to Do

Understand the fundamentals of AI governance and responsible AI adoption

Apply major frameworks — ISO/IEC 42001, NIST AI RMF, ISO/IEC 23894, OECD and UNESCO principles

Create AI governance policies, roles, responsibilities, and accountability structures

Identify, classify, and manage AI systems and risks across the full AI lifecycle

Run AI risk assessments, impact assessments, and effective risk mitigation

Govern Generative AI, data, security, and third-party AI against regulatory requirements

Implement, monitor, and continuously improve an enterprise AI governance program

IS THIS FOR YOU?

Who Is This Certification For?

- AI governance, AI risk, and AI compliance professionals
- AI ethics and responsible AI professionals, and AI governance officers
- Risk and compliance managers, internal auditors, and IT governance professionals
- Data governance, privacy, and information security professionals
- Legal and regulatory professionals supporting AI adoption
- AI/ML managers, digital transformation leaders, and business leaders overseeing AI

PRE-REQUISITES

There are no mandatory prerequisites. Basic familiarity with governance, risk, compliance, data privacy, or technology concepts is helpful, but no prior AI, programming, or technical background is required — the program starts with the fundamentals of AI governance and builds practical skills in AI risk, policies, frameworks, and governance implementation.

Learn from Experts

Learn from experienced practitioners and industry leaders who design, update, and teach the program — bringing real-world AI governance, risk, and compliance expertise to every module.
